Chapter 1

Introduction

The *Behavior Assessment System for Children*, Second Edition (BASC™–2) Teacher Rating Scales (TRS), Parent Rating Scales (PRS), and Self-Report of Personality (SRP) are three of the most widely used tools for assessing behavioral and emotional problems in children and adolescents ages 2 ½ years through 21 years, in both school and clinical settings. This BASC–2 manual supplement describes the purpose, development, interpretation, and technical properties of the newly developed BASC–2 Clinical Report. Clinicians and practitioners interested in similar information for the BASC–2 TRS, PRS, and SRP should consult the BASC–2 Manual (Reynolds & Kamphaus, 2004).

Features of the BASC–2 Clinical Report

The BASC–2 Clinical Report provides a number of new features primarily designed for psychologists working in private practice, hospital, outpatient clinic, and/or mental health settings. Features for these users are offered on all levels of the TRS and PRS, and on the child and adolescent levels of the SRP. Each newly added feature is described below.

1. **New Clinical Probability Indexes**—Several new indexes have been developed to help clinicians identify children who are presenting with behavioral and emotional problems at levels that might warrant the consideration of a formal classification or diagnosis. These probability indexes were developed based on teacher and parent ratings of children and adolescents who have been identified with a known behavioral classification or syndrome. The preschool versions of the TRS and PRS offer a single Clinical Probability Index, while the child and adolescent versions of the TRS and PRS offer both an EBD Probability Index (EBD, or emotional–behavioral disturbance, is a classification used for special education purposes in schools) and an ADHD Probability Index (attention-deficit/hyperactivity disorder). In addition, a Functional Impairment Index, developed for the TRS, PRS, and SRP forms, provides an indication of the level of limitation (i.e., impairment) in participation or functioning experienced by a child or adolescent across a variety of contexts or personal, social, and academic situations. *T* scores are provided for each index for the General norm group and the Clinical norm groups (specifically, the All Clinical, 19- to 21-year-old, and ADHD clinical norm group samples).
2. **Enhanced Report Narrative**—In addition to the information currently provided in the BASC–2 ASSIST™ and ASSIST Plus software reports, the BASC–2 Clinical Report offers expanded descriptions of and interpretive recommendations for scores obtained on the BASC–2 validity scales, including the F Index, Consistency Index, V Index, and L Index. The clinical report also features a new Clinical Summary section that integrates information from those BASC–2 scales that are particularly relevant for clinical settings (e.g., Aggression, Hyperactivity, Depression) and provides a number of considerations important for making formal decisions, especially those related to clinical diagnoses.

3. Enhanced *Diagnostic and Statistical Manual of Mental Disorders*, Fourth Edition, Text Revision (*DSM-IV®-TR*; American Psychiatric Association, 2000) Section—The BASC-2 Clinical Report offers a comprehensive section linking behaviors assessed on the TRS, PRS, and SRP to corresponding *DSM-IV-TR* diagnostic considerations, including those for ADHD, Asperger’s Disorder, Autistic Disorder, Conduct Disorder, Dysthymic Disorder, Generalized Anxiety Disorder, Major Depressive Disorder, Manic Episode, and Oppositional Defiant Disorder. In addition to establishing the behavioral links between these disorders and the behaviors rated on the BASC-2 forms, this section of the report can also be used as a tool for quickly identifying and easily recording other relevant behaviors and can serve as a worksheet to record all of the appropriate considerations for making a *DSM-IV-TR*-related classification or diagnosis.

Uses of the BASC-2 Clinical Report

The BASC-2 TRS, PRS, and SRP rating scales are designed for a wide variety of uses, including differential diagnosis of clinically relevant emotional and behavioral disorders, educational classification related to the presence of serious emotional disturbance for special education and related placement decisions (e.g., 504 programming, ADA accommodations), and program evaluation. The BASC-2 Clinical Report will likely be well suited for those clinicians working in a health or mental health setting and charged with determining the presence or absence of a clinical mental health or behavioral disorder. It is important to note that the information contained in the BASC-2 Clinical Report is not intended to make a particular diagnosis. Tests cannot diagnose; only trained clinicians are able to make such determinations. There are numerous factors that must be taken into consideration prior to arriving at a diagnosis, such as the individual’s history and life context, the developmental appropriateness of the behavior, the accuracy of the informant’s perception of the behavior, and any current impairments in social, occupational, or educational functioning. As a result, clinicians attempting to render a diagnosis should only use the BASC-2 Clinical Report in conjunction with other sources of information, such as careful history taking, clinical interviewing, and other assessment measures. Mental health diagnoses should always be provided at the discretion of a trained practitioner, who should use clinical judgment in arriving at any diagnostic conclusion. Thus, the information in the BASC-2 Clinical Report should only be interpreted by those individuals with appropriate training in relevant areas of professional psychology or psychiatry (e.g., clinical child and adolescent psychologists, pediatric psychologists, neuropsychologists, physicians) as well as other practitioners who are licensed in their jurisdiction of practice to provide *DSM-IV-TR* or similar diagnoses. The titles of these individuals will vary from jurisdiction to jurisdiction. Any attempt to list all specific titles of such persons would inevitably omit some and include others inappropriately since the qualifications required from one jurisdiction to another may differ substantially for the same title or license.

Overview of the BASC-2 Clinical Report

The BASC-2 Clinical Report provides a comprehensive review of the behavioral and emotional observations obtained from the TRS, PRS, and SRP forms. The information is organized into numerous sections, some of which may be omitted when generating a report for cases in which certain information is not necessary. Each report section is briefly described below.

1. Demographic Page and Profile—Contains the demographic information of the child or adolescent, along with information about the rater; also contains a graphical and table display of the clinical and adaptive scale scores.
2. Validity Index Summary—Presents a summary of the results of the F, V, L, and Consistency Validity indexes.
3. Extended Score Narrative—Provides a descriptive summary of the clinical, content, and adaptive scale scores along with behaviors typically associated with each scale.

4. **Intervention Summary**—Presents evidence-based interventions that can be used to help remediate the behavioral or emotional problems being experienced by the child or adolescent; this section is used in conjunction with the *BASC–2 Intervention Guide* (Vannest, Reynolds, & Kamphaus, 2008), which details the development and implementation of interventions carefully matched to the extant problems along with a review of the scientific literature supporting their applications.
5. **Content Scale Profile**—Provides a graphical and table display of the content scale scores.
6. **Content Scale Score Narrative**—Presents a descriptive summary of the content scale scores along with behaviors typically associated with each scale.
7. **Clinical Index Profile**—Presents a graphical summary of the Clinical Probability Index, EBD Probability Index, ADHD Probability Index, and Functional Impairment Index.
8. **Clinical Summary**—Integrates the results of scales particularly relevant to clinical settings, and provides considerations for making diagnostic or classification decisions.
9. **DSM–IV–TR Diagnostic Considerations**—Presents a link between behaviors rated on the BASC–2 TRS, PRS, or SRP forms with diagnostic criteria presented in the *DSM–IV–TR* for a variety of disorders.
10. **Target Behaviors for Intervention**—Provides a list of specific behaviors that are considered a priority for intervention and that might be particularly amenable to effective intervention.
11. **Items by Scale**—Provides a list of items sorted by scale along with corresponding responses.
12. **Item Responses**—Provides a summary of responses entered into the software; can be used to compare against a paper-and-pencil form to help prevent data-entry errors.

Interpretation

Detailed information on the interpretation of the BASC–2 TRS, PRS, and SRP clinical, adaptive, and content scales can be found in the BASC–2 Manual. Interpretation information on the Clinical Probability Index, EBD Probability Index, ADHD Probability Index, and Functional Impairment Index is provided below. In this application, *probability* is used to refer to the possibility that a score is indicative of a child or adolescent that might be classified into a general clinical, EBD, or ADHD group; it is not considered to be an estimate of the likelihood that a person has or does not have a clinical condition. Consistent with the clinical scales found on the TRS, PRS, and SRP, index *T* scores that fall within the range of 60 to 69 are considered At-Risk, while *T* scores 70 or above are considered Clinically Significant; such scores indicate a stronger possibility that a child or adolescent has behavioral problems that meet the level of a clinical classification. *T* scores less than 60 are considered to indicate a relatively low likelihood that a child or adolescent is exhibiting a pattern of problems similar to those who have been classified or diagnosed with a behavioral or emotional problem, or a relatively low likelihood that a child or adolescent is experiencing a significant level of functional impairment.

Clinical Probability Index

The Clinical Probability Index, available on the preschool level of the TRS and PRS, provides an overall indication of the similarity between the obtained behavioral ratings and the ratings of similarly aged children known to have a behavioral or emotional problem or classification. This index is based on items from a broad range of TRS and PRS scales across each of the composite scale groupings (see Table 1.1 for a list of items). A broad-based approach for item selection was chosen at the preschool level due to the difficulty differentiating between various disorders

among children in this age range. Children with elevated scores on this index are likely presenting with a variety of behavioral challenges that may include an inability to adjust well to change and pay attention, a propensity to do or say unusual things, problems with behavioral and/or emotional regulation, and difficulty maintaining appropriate social relationships.

Table 1.1
Clinical Probability Index Items for the TRS-P and PRS-P Forms

| Item | Item Numbers | |
|--|--------------|-------|
| | TRS-P | PRS-P |
| Acts as if other children are not there. | 74 | — |
| Acts out of control. | — | 17 |
| Acts strangely. | 99 | 73 |
| Adjusts well to changes in routine. | 96 | 97 |
| Begins conversations appropriately. | — | 32 |
| Cannot wait to take turn. | 68 | — |
| Disrupts the play of other children. | 9 | — |
| Has a short attention span. | — | 6 |
| Has poor self-control. | 36 | 33 |
| Has trouble making new friends. | 20 | — |
| Hits other children. | 34 | — |
| Is able to describe feelings accurately. | — | 114 |
| Is clear when telling about personal experiences. | — | 105 |
| Is easily distracted. | — | 90 |
| Is easily frustrated. | 91 | 42 |
| Is easily upset. | 16 | — |
| Is overly active. | 93 | 83 |
| Listens carefully. | 28 | 34 |
| Listens to directions. | — | 80 |
| Makes friends easily. | — | 54 |
| Needs too much supervision. | — | 61 |
| Pays attention. | 100 | 62 |
| Plays alone. | 70 | — |
| Politely asks for help. | 63 | 88 |
| Refuses to join group activities. | — | 106 |
| Responds appropriately when asked a question. | 67 | — |
| Says things that make no sense. | — | 101 |
| Seems out of touch with reality. | 60 | — |
| Shares toys or possessions with other children. | 46 | 1 |
| Shows feelings that do not fit the situation. | 85 | — |
| Speaks in short phrases that are hard to understand. | — | 2 |

EBD Probability Index

The EBD Probability Index, available on the child and adolescent levels of the TRS and PRS, provides an indication of the similarity between the obtained behavioral ratings and the ratings of similarly aged children identified as having an emotional or behavioral disturbance or disability (a classification primarily given in educational settings when making educational placement decisions). This index consists of items primarily from the TRS and PRS Externalizing Problems and Adaptive Skills scales, as well as a number of items from the Attention Problems, Atypicality, Depression, and Withdrawal scales (see Table 1.2 for a list of items). Children who present with elevated scores on this index are likely exhibiting a variety of behaviors that are disruptive, unusual, or antisocial, resulting in strained relationships with both adults and peers. In addition, they may display a range of negative emotions including anger, pessimism, and sadness.

Table 1.2**EBD Probability Index Items for the TRS and PRS Child and Adolescent Forms**

| Item | Item Numbers | | | |
|---|--------------|-------|-------|-------|
| | TRS-C | PRS-C | TRS-A | PRS-A |
| Acts in a safe manner. | — | 35 | — | — |
| Acts out of control. | 94 | 52 | 62 | — |
| Acts strangely. | 121 | — | — | — |
| Adjusts well to changes in family plans. | — | 78 | — | — |
| Adjusts well to changes in plans. | — | — | — | 18 |
| Adjusts well to changes in routine. | — | — | — | 31 |
| Adjusts well to new teachers or caregivers. | — | 65 | — | 1 |
| Analyzes the nature of a problem before starting to solve it. | 17 | — | — | — |
| Argues when denied own way. | 8 | — | — | — |
| Babbles to self. | 67 | — | — | — |
| Bullies others. | — | — | — | — |
| Calls other children names. | — | 104 | — | — |
| Complains when asked to do things differently. | — | — | 87 | — |
| Congratulates others when good things happen to them. | — | 31 | — | — |
| Deceives others. | — | — | 10 | — |
| Defies teachers or caregivers (people in authority). | — | — | — | — |
| Disobeys. | 28 | — | 94 | — |
| Disrupts the schoolwork of other children. | — | — | 118 | — |
| Does strange things. | 65 | — | — | — |
| Gets into trouble. | — | 157 | 24 | — |
| Gets upset when plans are changed. | 29 | — | — | — |
| Has poor self-control. | — | — | — | 45 |
| Has trouble making new friends. | 131 | 121 | — | — |
| Hits other children. | — | 26 | — | — |
| Is a “self-starter.” | — | 36 | — | 97 |
| Is easily distracted from class work. | — | — | 21 | — |
| Is easily soothed when angry. | 13 | — | — | — |
| Is easily upset. | 49 | — | 76 | — |
| Is effective when presenting information to a group. | — | — | — | 62 |
| Is good at getting people to work together. | — | — | — | 37 |
| Is negative about things. | 77 | — | — | — |
| Is pessimistic. | 105 | — | — | — |
| Is sad. | — | 114 | — | — |
| Is usually chosen as a leader. | — | — | — | 150 |
| Lies to get out of trouble. | — | — | — | 139 |
| Lies. | 112 | — | 80 | — |
| Loses temper too easily. | 36 | 90 | — | — |
| Makes friends easily. | — | 16 | — | — |
| Offers help to other children. | — | 85 | — | 126 |
| Quickly joins group activities. | — | 80 | — | — |
| Recovers quickly after a setback. | — | 14 | — | — |
| Refuses to join group activities. | 7 | 21 | — | — |
| Responds appropriately when asked a question. | — | — | — | 116 |
| Says, “I want to kill myself.” | — | 138 | — | — |
| Seeks attention while doing schoolwork. | — | — | 34 | — |
| Seeks revenge on others. | — | — | — | — |
| Shares toys or possessions with other children. | — | 1 | — | — |
| Shows interest in others’ ideas. | — | 149 | — | 84 |
| Teases others. | — | — | 50 | — |
| Threatens to hurt others. | — | — | 22 | — |
| Tries to bring out the best in other people. | — | 117 | — | 66 |
| Uses foul language. | — | — | 136 | — |
| Works well under pressure. | 30 | — | — | 67 |

Note. Precise wording of some items varies by level.

ADHD Probability Index

The ADHD Probability Index, available on the child and adolescent levels of the TRS and PRS, provides an indication of the similarity between the obtained behavioral ratings and the ratings of similarly aged children identified as having attention-deficit/hyperactivity disorder. In addition to items from the Hyperactivity and Attention Problems scales, this index also includes items from a variety of other scales (primarily the Adaptive Skills scales; see Table 1.3 for a list of items). Children who present with elevated scores on this index are likely experiencing problems that will adversely affect their academic performance, such as difficulty focusing or maintaining attention, inability to organize tasks effectively, difficulty making decisions, or difficulty moderating their own activity level.

Table 1.3**ADHD Probability Index Items for the TRS and PRS Child and Adolescent Forms**

| Item | Item Numbers | | | |
|--|--------------|-------|-------|-------|
| | TRS-C | PRS-C | TRS-A | PRS-A |
| Acts confused. | 79 | — | — | — |
| Adjusts well to changes in routine. | 57 | — | — | — |
| Argues when denied own way. | — | — | — | 64 |
| Cannot wait to take turn. | — | 6 | — | — |
| Communicates clearly. | — | 154 | — | — |
| Complains about being teased. | — | — | 53 | — |
| Complains when asked to do things differently. | — | — | — | 91 |
| Fiddles with things while at meals. | — | 70 | — | — |
| Gives good suggestions for solving problems. | 117 | — | — | — |
| Has a short attention span. | 5 | 9 | 49 | — |
| Has difficulty explaining rules of games to others. | — | — | 128 | — |
| Has good study habits. | 73 | — | — | — |
| Has trouble getting information when needed. | 50 | — | 16 | — |
| Has trouble keeping up in class. | 82 | — | — | — |
| Has trouble making new friends. | — | — | 126 | — |
| Interrupts others when they are speaking. | — | 102 | 99 | 80 |
| Is clear when telling about personal experiences. | 106 | — | — | — |
| Is easily distracted from class work. | 100 | — | — | — |
| Is easily distracted. | 61 | 73 | 92 | 136 |
| Is good at getting people to work together. | 86 | — | — | — |
| Is nervous. | — | — | 138 | — |
| Is overly active. | — | 84 | — | — |
| Is unable to slow down. | — | 20 | — | — |
| Is unclear when presenting ideas. | — | 81 | — | — |
| Is usually chosen as a leader. | 89 | — | — | — |
| Is well organized. | 91 | — | 74 | — |
| Listens attentively. | 72 | — | — | — |
| Listens carefully. | — | — | — | 106 |
| Listens to directions. | 128 | — | — | 65 |
| Loses temper too easily. | — | — | — | 100 |
| Makes decisions easily. | 58 | — | 60 | 77 |
| Makes friends easily. | — | — | 83 | — |
| Needs help from others to get up on time. | — | — | — | 63 |
| Organizes chores or other tasks well. | — | 39 | — | 93 |
| Quickly joins group activities. | 63 | — | — | — |
| Recovers quickly after a setback. | 85 | — | — | — |
| Repeats one thought over and over. | — | 55 | — | — |
| Responds appropriately when asked a question. | 3 | — | — | — |
| Speaks in short phrases that are hard to understand. | — | 66 | — | — |
| Takes careful notes during lectures. | — | — | 130 | — |
| Tracks down information when needed. | 78 | — | — | — |
| Volunteers to help clean up around the house. | — | — | — | 3 |
| Works well under pressure. | — | — | 88 | — |
| Worries. | — | — | — | 113 |

Note. Precise wording of some items varies by level.

Functional Impairment Index

The Functional Impairment Index, available on the preschool, child, and adolescent levels of the TRS and PRS, as well as the child and adolescent levels of the SRP, provides an indication of the level of difficulty a child has engaging in successful or appropriate behavior across a variety of situations including interactions with others, performing age-appropriate tasks, regulating mood, and performing school-related tasks. This index consists of items from a heterogeneous mix of other scales across each of the BASC–2 TRS, PRS, and SRP composite scales (see Tables 1.4 and 1.5 for a list of items). Children who present with elevated scores on this index are likely experiencing problems that adversely impact their ability to respond appropriately to everyday settings and situations.

Table 1.4**Functional Impairment Index Items for the TRS and PRS Forms**

| Item | Item Numbers | | | | | |
|---|--------------|-------|-------|-------|-------|-------|
| | TRS-P | TRS-C | TRS-A | PRS-P | PRS-C | PRS-A |
| Accurately takes down messages. | — | — | — | — | 140 | 2 |
| Acts confused. | 65 | 79 | — | 92 | 43 | — |
| Acts in a safe manner. | — | — | — | — | 35 | 33 |
| Acts without thinking. | — | 46 | 15 | 5 | 116 | 20 |
| Answers telephone properly. | — | — | — | 86 | 76 | 137 |
| Attends to issues of personal safety. | — | — | — | — | 99 | 123 |
| Avoids competing with other children. | — | — | — | — | 48 | — |
| Avoids other children. | 62 | 75 | 70 | 26 | 112 | 148 |
| Bothers other children when they are working. | 40 | 18 | — | — | — | — |
| Cannot wait to take turn. | 68 | 74 | 27 | 55 | 6 | 15 |
| Changes moods quickly. | — | — | — | 72 | 156 | 68 |
| Clings to parent in strange surroundings. | — | — | — | 110 | — | — |
| Communicates clearly. | 27 | 22 | 114 | 43 | 154 | 32 |
| Complains about health. | 39 | 6 | 56 | 38 | 91 | 69 |
| Complains that lessons go too fast. | — | 132 | 95 | — | — | — |
| Congratulates others when good things happen to them. | 58 | 32 | 33 | 19 | 31 | 36 |
| Cries easily. | 66 | 96 | 104 | 52 | 28 | 8 |
| Deceives others. | — | 98 | 10 | — | 79 | 119 |
| Decides what clothing to wear without help. | — | — | — | 39 | — | — |
| Does not complete tests. | — | 20 | 81 | — | — | — |
| Fails to wash hands when needed. | — | — | — | 95 | — | — |
| Gets failing school grades. | — | 110 | 67 | — | — | — |
| Gets into trouble. | — | 126 | 24 | — | 157 | 89 |
| Gets sick. | 57 | 139 | 42 | 10 | 94 | 115 |
| Gets upset when plans are changed. | — | 29 | 129 | — | — | — |
| Has a short attention span. | 3 | 5 | 49 | 6 | 9 | 35 |
| Has difficulty explaining rules of games to others. | — | 87 | 128 | — | 98 | 107 |
| Has good study habits. | — | 73 | 102 | — | — | — |
| Has poor handwriting or printing. | — | 48 | 39 | — | — | — |
| Has poor self-control. | 36 | 66 | 55 | 33 | 148 | 45 |
| Has problems with mathematics. | — | 138 | 137 | — | — | — |
| Has reading problems. | — | 76 | 123 | — | — | — |
| Has spelling problems. | — | 104 | 109 | — | — | — |
| Has trouble eating with a fork. | — | — | — | 123 | — | — |
| Has trouble fastening buttons on clothing. | — | — | — | 115 | 103 | — |
| Has trouble following regular routines. | — | — | — | — | 3 | — |
| Has trouble getting information when needed. | — | 50 | 16 | — | 145 | 146 |
| Has trouble keeping up in class. | — | 82 | 11 | — | — | — |
| Has trouble making new friends. | 20 | 131 | 126 | 9 | 121 | 134 |
| Is able to describe feelings accurately. | 64 | 31 | 100 | 114 | 108 | 86 |
| Is clear when telling about personal experiences. | 77 | 106 | 86 | 105 | 130 | 92 |
| Is easily soothed when angry. | 26 | 13 | — | 85 | 33 | — |
| Is easily upset. | 16 | 49 | 76 | 100 | 10 | 82 |
| Is effective when presenting information to a group. | — | — | — | — | — | 62 |
| Is shy with adults. | 45 | — | — | 82 | 153 | — |
| Is shy with other children. | — | — | — | 37 | 57 | 74 |
| Is unclear when presenting ideas. | 52 | 59 | 72 | 133 | 81 | 26 |
| Is well organized. | — | 91 | 74 | — | — | — |
| Loses temper too easily. | 79 | 36 | 41 | 77 | 90 | 100 |
| Makes decisions easily. | — | 58 | 60 | — | 132 | 77 |
| Makes friends easily. | — | 35 | 83 | 54 | 16 | 14 |
| Misses school or daycare because of sickness. | 14 | — | — | 13 | — | — |

Note. Precise wording of some items varies by level.

Table 1.4**Functional Impairment Index Items for the TRS and PRS Forms** *(Continued)*

| Item | Item Numbers | | | | | |
|--|--------------|-------|-------|-------|-------|-------|
| | TRS-P | TRS-C | TRS-A | PRS-P | PRS-C | PRS-A |
| Needs help bathing self. | — | — | — | 102 | — | — |
| Needs help from others to get up on time. | — | — | — | — | — | 63 |
| Needs help putting on clothes. | — | — | — | 67 | — | — |
| Needs help tying shoes. | — | — | — | 59 | — | — |
| Needs help using zippers. | — | — | — | 87 | — | — |
| Needs to be reminded to brush teeth. | — | — | — | 130 | 131 | 81 |
| Offers help to other children. | 38 | 71 | 75 | 47 | 85 | 126 |
| Organizes chores or other tasks well. | — | — | — | — | 39 | 93 |
| Pays attention. | 100 | 33 | 120 | 62 | 17 | 5 |
| Picks out clothes that match the weather. | — | — | — | — | — | 141 |
| Plays alone. | 70 | 47 | 111 | — | — | — |
| Prefers to be alone. | — | — | — | — | 144 | 88 |
| Provides full name when asked. | 17 | — | — | 30 | — | — |
| Provides home address when asked. | 89 | 134 | — | 58 | — | — |
| Provides own telephone number when asked. | 42 | 115 | — | 15 | 34 | — |
| Quickly joins group activities. | 87 | 63 | 98 | 134 | 80 | 104 |
| Readily starts up conversations with new people. | — | — | — | 93 | — | — |
| Refuses to join group activities. | 12 | 7 | 96 | 106 | 21 | 44 |
| Refuses to talk. | 37 | 19 | 124 | — | — | — |
| Repeats one activity over and over. | — | — | — | — | — | 71 |
| Responds appropriately when asked a question. | 67 | 3 | 58 | 99 | 122 | 116 |
| Says all letters of the alphabet when asked. | 2 | — | — | 71 | — | — |
| Says things that make no sense. | 90 | 123 | 121 | 101 | 128 | 87 |
| Says, "I get nervous during tests" or "Tests make me nervous." | — | 25 | 110 | — | — | 58 |
| Seems lonely. | — | 12 | 7 | — | 124 | 98 |
| Seems out of touch with reality. | 60 | 51 | 23 | — | 75 | 131 |
| Seems to take setbacks in stride. | 21 | 113 | 17 | — | — | — |
| Sets realistic goals. | — | — | — | — | 67 | 111 |
| Shows fear of strangers. | — | — | — | 65 | 89 | — |
| Speaks in short phrases that are hard to understand. | — | — | — | 2 | 66 | — |
| Tracks down information when needed. | — | 78 | 44 | — | 113 | 56 |
| Tries to do well in school. | — | — | 18 | — | — | — |
| Volunteers to help clean up around the house. | — | — | — | — | 71 | 3 |
| Will change direction to avoid having to greet someone. | — | — | — | — | 25 | — |
| Will speak up if the situation calls for it. | — | — | — | — | 100 | 47 |
| Worries about things that cannot be changed. | 47 | 11 | 68 | 63 | 77 | 72 |
| Worries. | 8 | 137 | 54 | 76 | 5 | 113 |
| Writes messages that are unclear or incorrect. | — | — | — | — | — | 122 |

Note. Precise wording of some items varies by level.

Table 1.5**Functional Impairment Index Items for the SRP Forms**

| Item | Item Numbers | |
|--|--------------|-------|
| | SRP-C | SRP-A |
| I always do homework on time. | — | 58 |
| I am bothered by not getting enough sleep. | 86 | — |
| I am dependable. | 126 | 76 |
| I am disappointed with my grades. | 81 | 90 |
| I am good at things. | — | 104 |
| I am lonely. | 79 | 105 |
| I am someone you can rely on. | — | 166 |
| I can't seem to control what happens to me. | 35 | — |
| I do things over and over and can't stop. | — | 152 |
| I fail at things. | 102 | 144 |
| I feel like I want to quit school. | 59 | 142 |
| I feel sad. | 74 | 111 |
| I feel that nobody likes me. | 125 | 103 |
| I forget things. | 66 | 83 |
| I get nervous. | 83 | 108 |
| I get so nervous I can't breathe. | 121 | 71 |
| I give up when learning something new. | 122 | — |
| I have attention problems. | 47 | 53 |
| I have trouble paying attention to the teacher. | 131 | 113 |
| I have trouble paying attention to what I am doing. | 94 | 143 |
| I have trouble sitting still. | 90 | 124 |
| I have trouble sleeping the night before a big test. | — | 162 |
| I hear voices in my head that no one else can hear. | 134 | 122 |
| I just don't care anymore. | 48 | 38 |
| I often do things without thinking. | 40 | — |
| I often have headaches. | — | 9 |
| I quit easily. | — | 150 |
| I talk while other people are talking. | 118 | 118 |
| I used to be happier. | 14 | 8 |
| I worry a lot of the time. | — | 41 |
| My stomach gets upset more than most people's. | — | 69 |
| Nothing is fun anymore. | 33 | 21 |
| Often I feel sick in my stomach. | — | 34 |
| Other children don't like to be with me. | 41 | 43 |
| People tell me I should pay more attention. | 9 | 5 |
| People tell me that I am too noisy. | 99 | 164 |
| When I start talking, it is hard for me to stop. | — | 168 |
| When I take tests, I can't think. | 53 | 114 |

Development of the Clinical Report Indexes and *DSM-IV-TR* Report Section

The clinical report for the BASC–2 TRS, PRS, and SRP contains newly developed index scores and a report narrative as well as an enhanced *DSM-IV-TR* section. The development of these indexes and report narrative is described below.

Development of the Clinical Probability Indexes and the Functional Impairment Index

Although the BASC–2 TRS, PRS, and SRP rating forms already contain a number of clinically useful and relevant scales and indexes, a development goal of the BASC–2 Clinical Report project was to provide an easy and efficient way to determine the comparative similarities between a child's ratings and the ratings of children known to have a behavioral or emotional problem. Such a comparison can be done using BASC–2 scale scores, but it involves a relatively complex synthesis of numerous pieces of information. To this end, several clinical probability indexes were developed for the BASC–2 Clinical Report using a multistep process. This process is detailed below.

- 1. Identification and selection of clinical groups.** Using the data collected during the BASC–2 standardization project (see the BASC–2 Manual for complete details about the project), children and adolescents who were indicated by parents as having an identified behavioral or emotional problem (e.g., ADHD, EBD, anxiety problems, depression) were selected for inclusion in a primary group referred to as the All Clinical group. For the child and adolescent levels of the TRS, PRS, and SRP, the primary group was also subdivided into more targeted groups of analysis that included an EBD group and an ADHD group. (At the preschool level, the primary group was not subdivided due to the inherent difficulties associated with differential diagnosis of children ages 2 to 5 years.) Limited sample sizes prohibited the further subdivision of groups. Prior to data analysis, for each BASC–2 form and level (e.g., TRS-C, PRS-A), about two-thirds of the cases were randomly assigned to the initial item-development sample and the remainder were assigned to the item-holdout (cross-validation) sample that was used during the validation stage of the project.
- 2. Selection of items for the clinical probability indexes that discriminate between clinical and nonclinical groups.** For each BASC–2 form and level, using the item-development samples, a series of analyses were performed to identify items that discriminated between clinical and nonclinical groups. Each BASC–2 item was correlated with membership in each of the three clinical groups. In addition, a t test was performed on each item using a sample of clinical and nonclinical children matched on the demographics of sex, age, race/ethnicity, region, and parent education level. Preliminary item selections were made based on a number of factors, including the magnitude of the correlations and t values, the pattern of results across clinical groups (with an emphasis on selecting items that showed markedly higher results for one group than the other groups), and in some cases clinical judgment regarding the importance of the item to the underlying behavioral or emotional problem. Items were assigned to only one clinical group index. These selections resulted in a list of approximately the top 30 performing items for each clinical group and for each BASC–2 form and level.

- 3. Development and evaluation of initial clinical probability indexes.** The items selected during the previous step were used to form the initial clinical indexes. Coefficient alpha was computed to provide an overall estimate of the reliability for each index, and item-total correlations provided a measure of the contribution of each item to the overall index. In addition, sensitivity and specificity analyses were performed for each index, predicting membership in each clinical group (All Clinical, EBD, and ADHD). A number of considerations were made when reviewing these results. Sensitivity values of at least .50 and specificity values of at least .90 were used as initial benchmarks for acceptance. In addition, the pattern of results across indexes and clinical groups was reviewed. Clinical indexes were expected to show stronger sensitivity and specificity relative to their associated group than to the other groups. For the child and adolescent levels, it was apparent that the All Clinical Index was not able to discriminate between clinical groups, and the index was dropped from further consideration. Items that were originally assigned to the All Clinical Index were reevaluated for inclusion into either the EBD Index or ADHD Index, resulting in additional iterations of the analyses to complete the initial item-selection process.
- 4. Development of the Functional Impairment Index.** Initial item selections for the Functional Impairment Index were based on a content review of items that reflected diminished or reduced functioning across a variety of areas. For the teacher and parent forms, items from scales such as Activities of Daily Living, Functional Communication, Learning Problems, and Withdrawal formed the initial core of the index, and items from other scales were included based on their content. After an initial index was created for each form and level, a series of analyses was performed to determine the psychometric properties of the index from each form and level; items were added or dropped based on their overall contribution to each index. A final review of the items was completed to ensure they were consistent with the original intent of the scale.

Development of the Clinical Report Narrative

The Clinical Summary section of the BASC–2 Clinical Report includes a narrative that is designed specifically for use in clinical settings. Developed by the authors and clinicians from the development team, the purpose of the clinical narrative is to provide diagnostic considerations by integrating those BASC–2 scales most closely related to prevalent childhood disorders (e.g., ADHD, anxiety). These scales include Hyperactivity, Aggression, Conduct Problems, Depression, Anxiety, Somatization, and Attention Problems, scales that are often associated with a wide variety of clinical diagnoses. In addition, consideration is given to a number of other BASC–2 scales that can influence both diagnosis and treatment planning, including Anger Control, Interpersonal Relations, Learning Problems, Locus of Control, Self-Esteem, Self-Reliance, Sense of Inadequacy, Social Skills, Social Stress, Study Skills, Withdrawal, Negative Emotionality, Developmental Social Disorders, and Mania.

The narrative section of the report also provides information regarding prevalence rates of the pattern of scale elevations based on the occurrence rates found in the BASC–2 general population normative samples (using the combined-sex norm groups). This information should be helpful for those clinicians interested in understanding how typical (or atypical) a pattern of scores is compared to what is found in the general population.

It is important to note that the intent of the Clinical Summary is not to provide a diagnosis; only mental health professionals with advanced training and credentials can determine diagnoses. However, for those professionals, the narrative can be used as a step in the overall diagnostic process.

Development of the *DSM-IV-TR* Report Section

The BASC-2 Clinical Report contains a *DSM-IV-TR* Diagnostic Considerations section that is based on the information contained in the *DSM-IV-TR* (adapted with the permission of the American Psychiatric Association, 2010) for a variety of behavioral or emotional conditions including ADHD, Asperger's Disorder, Autistic Disorder, Conduct Disorder, Dysthymic Disorder, Generalized Anxiety Disorder, Major Depressive Disorder, Manic Disorder, and Oppositional Defiant Disorder. The purpose of this section is to provide clinicians with an easy-to-use and efficient format for recording their review of the considerations needed to make a formal *DSM-IV-TR* classification or diagnosis. This section was developed based on a careful review of the criteria and considerations provided in the *DSM-IV-TR* for the aforementioned conditions. The authors and development team then conducted a comprehensive content review of the BASC-2 items to align items with corresponding symptoms from each *DSM-IV-TR* content area.

Standardization, Reliability, and Validity

This chapter presents detailed technical information about the reliability and validity of the clinical probability indexes provided in the BASC–2 Clinical Report. The information contained in this chapter replicates the analyses provided in the BASC–2 Manual and provides results for the newly developed indexes. This chapter focuses on summarizing the results of these analyses; readers who are interested in additional information about each of the topic areas or descriptions of the other testing instruments mentioned in this chapter should consult the BASC–2 Manual.

Standardization

The indexes provided in the BASC–2 Clinical Report use the same normative samples that are reported in the BASC–2 Manual with one exception: No norms are provided for the specific learning disability sample. Index T scores are based on a mean of 50 and standard deviation of 10. Skewness of the raw-score distributions for each index is provided in Table 3.1. As shown in the table, each index is positively skewed at generally a moderate to high level.

Table 3.1
Skewness of Raw-Score Distributions, by Age Level
(General Norm Samples)

| | Ages | TRS | PRS | SRP |
|-----------------------------|-------------------|------|-----|-----|
| Clinical Probability Index | 2–5 | .83 | .65 | — |
| | 6–11 | — | — | — |
| | 12–18 | — | — | — |
| EBD Probability Index | 2–5 | — | — | — |
| | 6–11 | 1.32 | .66 | — |
| | 12–18 | 1.60 | .25 | — |
| ADHD Probability Index | 2–5 | — | — | — |
| | 6–11 | .24 | .90 | — |
| | 12–18 | .49 | .51 | — |
| Functional Impairment Index | 2–5 | .37 | .45 | — |
| | 6–11 ^a | .67 | .65 | .77 |
| | 12–18 | .66 | .60 | .73 |

^a8–11 for SRP

Reliability

A number of reliability estimates are provided below, including internal consistency, test–retest, and interrater (i.e., two different raters rating the same child). A brief summary is provided for each type.

Internal Consistency

Coefficient alpha reliability results for the English forms are provided in Tables 3.2 and 3.3 for the general and clinical norm groups, respectively. Reliabilities are similar across the general and clinical samples, and range from .81 to .96. Standard error values, which are parallel to the pattern of coefficient alpha results, are presented in Tables 3.4 and 3.5 for the general sample and clinical samples, respectively. Coefficient alpha reliability for the Spanish PRS and SRP forms are presented in Table 3.6, and range from .72 to .92 for the combined general sample norm groups.

^aAges 8–11 for SRP.**Test-Retest**

Test–retest reliability estimates are provided in Table 3.7. On average, the time between completion of rating forms is about 6 weeks (see the BASC–2 Manual for specific intervals for each BASC–2 form and level). Overall, correlation coefficients tended to be slightly higher for teacher ratings (ranging from .86 to .94) than parent or student ratings (ranging from .77 to .90), although all are within acceptable levels and are consistent with other BASC–2 scales.

Interrater

Interrater reliability estimates for the teacher forms are provided in Table 3.8 and range from .53 to .82; results for the parent forms are provided in Table 3.9 and range from .70 to .84. These results are consistent with other BASC–2 scales.

Validity

Consistent with the validity evidence provided in the BASC–2 Manual, the Clinical Probability Index, EBD Probability Index, ADHD Probability Index, and Functional Impairment Index have been compared to a number of other rating scales measuring behavioral and emotional functioning. A brief discussion of the results is provided below. For more detailed information about the behavioral and emotional rating scales used in these comparisons and the sample characteristics of each study, refer to chapters 12, 13, and 14 of the BASC–2 Manual.

Correlations With Other BASC–2 Scales

To better understand the relationship between each of the new indexes included in the BASC–2 Clinical Report and the existing BASC–2 scales, correlations between them have been provided in Tables 3.10 through 3.15 for the English forms and Tables 3.16 and 3.17 for the Spanish forms. Overall, correlations between the new indexes and existing BASC–2 scales are moderate to high and are influenced by items that are common among the new indexes and other BASC–2 scales. Correlations tend to be higher with global composite scales (i.e., the Behavioral Symptoms Index on the TRS and PRS, and the Emotional Symptoms Index on the SRP) and externalizing and adaptive scales. Patterns of correlations within the general sample are consistent with patterns within the clinical samples. In addition, on the parent and student forms, patterns of correlations found between the English and Spanish samples are also fairly consistent.

Correlations With Achenbach System of Empirically Based Assessment (ASEBA) Forms

Comparisons between the BASC–2 Clinical Report indexes and the ASEBA (Achenbach & Rescorla, 2000, 2001) teacher, parent, and student forms are presented in Tables 3.18 through 3.24. On the preschool forms, correlations between the Clinical Probability Index and the ASEBA Total Problems scale are moderate to high, ranging from .65 to .85. On the child and adolescent forms, the pattern of correlations is generally what would be expected; correlations between the EBD Probability Index and the ASEBA Total Problems and Oppositional Defiant Problems are moderate to high, ranging from .53 to .83, and correlations between the ADHD Probability Index and the ASEBA Inattention and ADHD scales are .57 to .76. Correlations between the Functional Impairment Index from the preschool, child, and adolescent BASC–2 forms and the ASEBA Total Problems scale are high, ranging from .67 to .78.

Correlations With Conners' Rating Scales-Revised Forms

Comparisons between the BASC-2 Clinical Report indexes and the *Conners' Rating Scales-Revised* (Conners, 1997) teacher, parent, and student forms are presented in Tables 3.25 through 3.29. On the teacher forms, the ADHD Probability Index tends to correlate highest with the Conners' attention-related scales; however, the EBD Probability Index tends to correlate higher with the Conners' hyperactivity-related scales, compared to the ADHD Probability Index. Both the ADHD and EBD indexes correlate similarly to the Conners' overall ADHD scales. For the parent forms, the ADHD Probability Index tends to correlate highest with both the Conners' attention- and hyperactivity-related scales, as well as the overall ADHD indexes, compared to the correlations between the Conners' ADHD scales and the ADHD Probability Index. For the student form, the Functional Impairment Index correlates highest with the Conners' Emotional Problems and ADHD scales.

Correlations With the *Vineland™ Adaptive Behavior Scales, Second Edition (Vineland-II)*

Comparisons between the BASC–2 Clinical Report indexes and the Vineland–II (Sparrow, Cicchetti, & Balla, 2005, 2006) teacher and parent forms are presented in Tables 3.30 through 3.35. The correlation between the BASC–2 Functional Impairment Index and the Vineland–II Adaptive Behavior Composite is moderate to high across forms, ranging from $-.49$ to $-.79$.

Correlations With the *Behavior Rating Inventory of Executive Function*[®] (BRIEF[®])

Comparisons between the BASC–2 Clinical Report indexes and the BRIEF (Gioia, Isquith, Guy, & Kenworthy, 2000) scales on the parent form are presented in Tables 3.36 and 3.37. In general, the correlations between the BASC–2 Clinical Report indexes and the BRIEF scales are moderate to high across all scales.

Table 3.36

Correlations Between BASC-2 Forms

Comparisons across BASC-2 forms (e.g., comparing TRS with PRS) are presented in Tables 3.38 through 3.44. Consistent with other BASC-2 results, correlations tend to be stronger between the TRS and PRS scales compared to correlations between the teacher and parent forms and the SRP.

Table 3.38

^aColumns under “Adolescent Indexes for PRS” show correlations of PRS-A Indexes with SRP-A Functional Impairment Index, Composites, and Scales.

^bColumn under “Adolescent Index for SRP” shows correlations of SRP-A Functional Impairment Index with PRS-A Indexes, Composites, and Scales.

Clinical Group Comparisons

Scores from the BASC–2 Clinical Report indexes were compared across a number of groups with identified behavioral, emotional, or physical problems. Table 3.45 contains the average scores on the BASC–2 Clinical Report indexes of those children with an identified problem for the TRS, PRS, and SRP. For many of these groups, scores on the clinical report indexes are in the At-Risk classification range. In general, scores are somewhat higher (up to one-third of a standard deviation) for the children with conditions that correspond to the clinical report index (e.g., EBD Probability Index predicting EBD) compared to noncorresponding conditions (e.g., EBD Probability Index predicting ADHD), with the exception of the TRS-C form. The Functional Impairment Index is elevated for a number of conditions, as would be expected.

Table 3.46 presents an additional analysis for the All Clinical, EBD, and ADHD samples. Scores on the BASC–2 Clinical Report indexes from children with each of these conditions were compared to a matched sample (matched on sex, age, region, race/ethnicity, and parent education level) of children with no identified condition, for both the item-development sample and a cross-validation sample (as discussed in chapter 2). For all comparisons, there are large differences between the groups, all of which are significant at $p < .01$ or lower. The effect size of the differences between the groups is well over 1.0 in almost all comparisons, indicating a large difference between the two populations.
